## **ABRAHAM M. DE SOLLA**

Just as we go to press we learn of the death of Abraham M. De Solla, probably the oldest "Asbestos Man" in the United States and certainly the oldest on the Pacific Coast. He was 85 years old. He founded the De Solla-Deussing Company representing Keasbey & Mattison Company in the early eighties when Magnesite Covering was first used. The company later sold out to the Magnesite Asbestos Supply Company and it in turn to the present Plant Rubber & Asbestos Works. Mr. De Solla's death occurred on December 2nd.

## THIS AND THAT

Minerals Yearbook — 1934 has recently been published by the United States Bureau of Mines, Washington, D. C., and contains very complete data on United States Mining activities. The price of the book is \$1.75 and it may be purchased only from the Superintendent of Documents, Government Printing Office, Washington, D. C.

Rats evidently appreciate the fireproof qualities of asbestos. They ripped the asbestos covering from the pipes in the new prison building on Rikers Island to build fireproof nests, according to the Brooklyn, N. Y., Eagle.

And from the Norfolk, Va., Ledger Dispatch comes this one: "Fire in a Seattle asbestos plant was put out. Fire with no better sense than to get into a place like that deserved to be put out."

The old times so jolly and clever  
Like the stage coach have long been passé  
But one thing we'll cling to forever  
The old fashioned wish of the day —

MERRY CHRISTMAS.
